

4.0 Meter ESA

Like all ASC Signal earth station antennas, the 4.0Meter low-cost Earth Station Antenna provides high gain and exceptional pattern characteristics.

This antenna system is designed to address the stringent requirements of both the television broadcast industry and telecommunications network operators who demand unsurpassed flexibility and electrical performance in high-quality, cost-effective, and reliable packages.

The motorizable pedestal mount allows for motorized applications and features 180 degree coarse azimuth coverage in three continuous overlapping ranges. This antenna offers an optional low-cost mount utilizing a customer-provided pipe or ASC Signal provided flanged pipe mount. In addition, an optional equipment enclosure for this mount is available for mounting RF equipment at the antenna.

The electrical performance and exceptional versatility provides the ability to configure the antenna with your choice of linearly- or circularly- polarized 2- or 4- port combining networks. That versatility is provided at the time of initial purchase, as well as in the future, as your satellite communication requirements evolve.

This antenna system is used worldwide in broadcast applications and high density data, voice and communications networks. The ASC Signal 4.0 meter earth station antenna features a computer-optimized dual reflector Gregorian optics system and close-tolerance manufacturing techniques.

This combination provides extremely accurate surface contour resulting in exceptionally high gain and closely controlled pattern characteristics. ASC Signal earth station antennas provide maximum durability with minimal maintenance.
