

DATASHEET | JULY 2014

Applications

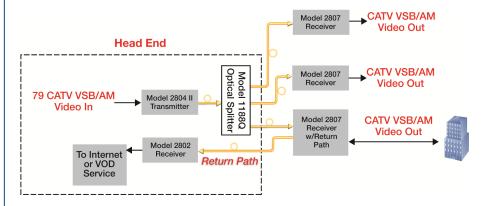

- CATV
- Private Network Solutions
- Professional Distribution Systems

Features

- Wide Bandwidth of 50 to 860 MHz Accommodates Up to 79 Channels on All Models
- Provides Excellent Picture Quality with a CNR up to 54.5 dB, CSO of -63 dBc and CTB of -66 dBc
- Provides up to +38 dBmV RF Output Power Over the Entire Optical Input Range, Allowing a Greater Number of Drops or Splits
- Wide Optical Input Range of -8 dBm to +4.5 dBm Permits the Use of a Lower Power Transmitter, Reducing System Cost
- Capable of Responding to Changing System Requirements with Field-Installable Return Path Modules
- Digitally Adjustable Built-In RF Attenuator and Equalizer Settings Allow for Accurate Adjustment of Parameters Via an LCD Screen

The 2807 Mini-Node CATV Optical Receiver, working with either the 2804 PDS or 2805 PNS transmitter, provides CATV distribution head end operators with an extensive array of features that offer a low-cost solution to increase system performance. The receiver provides an RF output of +38 dBmV over the entire optical input range allowing multiple RF splits without the use of an external RF amplifier. Additionally, the mini-node's ability to operate over a wide optical input range of -8 to +4.5 dBm allows for a variety of system designs without degrading performance. An LCD display enables the operator to accurately set the tilt and RF output levels to ensure quality of service. The 2807 mini-node can be ordered either with or without the return path transmitter module. A separate return path module may also be ordered, allowing for a quick factory upgrade or laser replacement. The return path module utilizes either an FP or DFB laser. The modular design of the 2807 offers the flexibility and performance demanded by today's broadband professional.
