

DESCRIPTION

This is a quad scalar ring for a prime focus C-Band satellite dish. Use it to mount up to 4 Feedhorns or LNBFs on a single dish.

Possible applications include reception from 4 adjacent satellites using a single stationary dish (e.g. 121W, 125W, 127W, 131W) or reception of both linear and circular satellite signals on a motorized dish by installing two different LNBFs (e.g. Linear LNBF and Circular LNBF).

Other possible applications include simultaneous reception of C-band and Ku-band signals with negligible signal attenuation by separating the bands.

This scalar ring will allow you to receive every type of satellite signal: FTA C-band (North America), FTA C-band (Latin America), FTA Ku-band, Dish, DirecTV, Bell, Claro, etc.

FEATURES

- Precision cast-aluminum construction

INCLUDES

- Quad Focus Scalar Ring
- Mounting Screws
